CURRICULUM VITAE

Victoria Delgado was born in Barcelona (Spain) the 8th of December 1975. After graduating from Sant Andreu Institute in 1993, she studied Medicine at the University of Barcelona and obtained her medical degree in 1999. After a 5 year period training at the Hospital Clinic of Barcelona, she became Cardiologist and was awarded with a research fellowship grant from the University of Barcelona. After one year at the laboratory of echocardiography of the Hospital Clinic, she was awarded with a research grant from the Spanish Society of Cardiology and moved to Leiden and started a research fellowship on the role of imaging in cardiac resynchronization therapy at the Department of Cardiology of the Leiden University Medical Center (supervisors: Prof. dr. J.J.Bax and Prof. dr. M.J.Schalij). This research fellowship was continued during 2 more years with the support of the Government of Catalunya and the European Society of Cardiology. The results of these studies are described in the present thesis. In January 2010, she joined the Department of Cardiology of the Leiden University Medical Center and is at present working as staff member.
ACKNOWLEDGEMENTS

This thesis was possible thanks to all the friends and colleagues I met on my way until here. These 3 years at the Leiden University Medical Center have been a unique experience. I had the opportunity to meet and work with extraordinary colleagues and friends. I would like to thank to all staff of the Department of Cardiology at LUMC for all the support and all the good moments I have had during these years.

I would like to express my gratitude to Drs. Brugada, Pare, Azqueta and Sitges, from Hospital Clinic (Barcelona, Spain) who convinced me to discover new places and new ways of working and who proposed me to come to Leiden to work under the supervision of Prof. Jeroen J. Bax. During my training in Cardiology at the Hospital Clinic of Barcelona, I learnt from them all the knowledge I have on cardiology and, specially, on echocardiography. They also introduced me on medical research and working with them was a real pleasure. Afterwards, I had the great opportunity to expand my knowledge on new imaging technologies at the Leiden University Medical Center. I would like to thank Dr. Magriñà for his excellent advice that helped me to decide continuing this path, combining clinical activity and research in The Netherlands.

As for my colleagues on research and friends here in Leiden, I would like to thank them all their help and support and all the good moments we had together: Claudia, Laurens, Sjoerd, Dennis, Rutger, Roderick, Gabija, Matteo, Gaetano, Miriam, See Hooi, Agnieszka, Dominique, Tomasz, Kelvin and, specially, Arnold, Louisa, Nina and Joanne.

Finally, I would like to thank my family, mama, papa, Juaniega, my dear aunts, Mari Carmen and Charo, and my grandparents for their support and encouragement during my fellowship period at LUMC and for helping in one of the most difficult decisions of my life but the one that has given to me the most challenging and great moments.

Thank you all!
