Propositions

Belonging to the Thesis

Protecting group strategies in carbohydrate and peptide chemistry

1- There is no such thing as an innocent protective group.  
   This Thesis

2- There is no such thing as an ideal protecting group.  
   This Thesis

3- The difference between fluorophilic and lipophilic is more diffuse than is often described.  
   This Thesis

4- Neighboring group participation in glycosylation reactions can occur from positions rather distal from the primary reaction center.  
   This Thesis  

5- The complexity and diversity of oligosaccharides defies their synthesis by a simple and general method.  

6- Automated synthesis of carbohydrates has the promise to revolutionize the life sciences.  

7- Peace is impossible without social justice.

8- Life itself is the biggest teacher.

9- Problems appear smaller when looked at them from a distance.

10- Agreeing on everything is hypocritical, whereas disagreeing on everything causes hate and enmity.
