Acknowledgements

I would like to express my sincere gratitude to all the people that contribute to the completion of this thesis. With you all, living and studying in The Netherlands was a great experience!

I’m grateful to all my colleagues at the Division of Toxicology. Maaike, the first day I met you, I received my first gift here, the yellow mark cup for coffee/tea break. My first year learning from you and working with you, from animals to cells, from rats to mice, was a lot of fun and unforgettable. Your hard work and great contribution to the FAK project are deeply appreciated. Marjo, learning western blotting technique from you was a nice experience. The rats work with you and Maaike, and RPTC isolation demonstration (especially by Bob) gave me the first impression of \textit{in vivo} experiments here. Thanks for all your suggestions for experiments, presentations and papers.

Leo, Geurt and Sreenivasa, my dear folks! Working with you guys in kidney group was my great pleasure. Leo and Geurt, both of you put so much effort into the Epac project and helped a lot in the FAK project. Those studies wouldn’t have been published without your contributions. Special thanks to Geurt for being the paranimf, translating thesis summary into Dutch and previously taking over all the DEC applications in Dutch. Sreenivasa, your microscopy and Q-PCR work was vital for the project and all your help is appreciated. Tsinat, Yves and Tijmen, thanks for the help and support during your stage periods.

Hoa, Marja and Jordi, it was nice to share with you the happiness and difficulty as a PhD student in TOX during those four years. Giulia, Lisa and Bram, I had a good time in HB702 during the last three years and appreciate your contributions to the pleasant and cooperative atmosphere in the office. Monique, thanks for arranging all the paper work and always helping to extend my electronic key. Ine, you are always reliable and patient to give help either in the lab or in the animal facility. Hans, thanks for your clear explanation and demonstration of confocal microscopy, and all other technical help. Johan and Fred, your hospitality and enthusiasm make performing experiments in the animal facility really enjoyable.

I would like to further acknowledge Martine v M for providing me RosaCre mice all the time; Chantal and Reshma for their kind help with animals and tissue staining; Kuan Yan for microscopic image analysis; John for microarray data analysis and very useful discussion; Wies, Leah and Veeranda for providing tumor cell lines and experimental suggestions; Ella and Haziz for technical help with flow cytometry analysis and Maxi-prep; Ilse, Louise, Martine R, Sylvia, Sandra, Yafeng Ma, Yinghui, Ram and Erik for their generous sharing of experiences and ideas in research. Di Zi and Jiangling, doing lab tasks with you is always a relaxing time for me. For all the ex- and new TOXers, Pascal, Stephan, Joelle, Yvonne, Libo, Maria, Lizette, Zuzanna, Eero, Bas, Steven, Emrah, Michiel, Bart, many thanks for creating and keeping a nice team.

I give my gratitude to the financial support of China Scholarship Council (CSC) and LACDR. The NJUers, Xin Leng, Zhi Ding, Yafeng Ma, Ying Zhao, Jun Wang, Qi Jia and Feng Wang, it was amazing to meet you again in Leiden, at the other side of the continent. Thanks for your warm welcome at the beginning and continuous help and accompany. Chunxiu Hu, Lu Feng, Wenjie Liao, Wei Zhao and Ying Zhou, all the trips with you became wonderful memories in my life. Zhikai Xu, Zhuangxiong Huang, Wenwen Zhang and Chao Zhu, it was great meeting you here. I also appreciate all my Chinese friends here supporting me all the time. My dearest parents, I know that you are always there, whenever for whatever.

Yu Qin, in Leiden
