**Author:** Talamo, Sahra  
**Title:** Refining 14C dating of bone >30,000 BP: establishing an accurate chronology for the Middle to Upper Palaeolithic transition in France  
**Date:** 2012-06-06
Acknowledgments

It is my pleasure to acknowledge all those people that helped me to complete this thesis. This is an impossible task, given the many people that were involved over the past three years. I am going to try anyway, and if your name is not listed, rest assured that my gratitude is not less than for those listed below.

First and foremost, I would like to express my deep and sincere gratitude to Mike Richards and Jean-Jacques Hublin who offered me this great opportunity, trusted in my work and suggested the road to take. Without their support, this project would not have been possible.

I am particularly grateful to my supervisor Mike Richards, who made my Ph.D. experience productive and stimulating, for his detailed and constructive comments and for his encouragement and faith.

I warmly thank Shannon McPherron for his interest in my work, for his suggestions and enjoyable social life.

I would like to thank all the members of the Department of Human Evolution, especially the staff of the laboratory, Annabell Reiner, Stefanie Bösé, Steffi Albert, and Sven Steinbrenner, for their excellent work and support, the administrative team, Silke Streiber, Cornelia Schicke and Diana Carstens, without whom I would have been lost in the bureaucratic labyrinth. A special thanks to Alyson Reid, for final advice on proper English phrasing, and Dennis Reinhardt for his help and patience in dealing with computer issues.

I am grateful to the entire isotope group for most joyful discussions about our field, stimulating suggestions during my work, and of course for sharing dinner, beers and funny moments, in particular Marcello Mannino, Christine Verna, Kate Britton, Domingo Carlos Salazar Gracia, Colin Smith, Ben Fuller, and Olaf Nehlich.

A special thanks to Paula Reimer and Konrad Hughen for their part on the 1st paper (chapter 5) in this thesis.

I also thank Marie Soressi and Morgan Roussel, who made the 3rd paper (chapter 7) of this thesis possible, for the magic moments at Les Cottés.

I am most grateful to the staff of the AMS facilities of Oxford, Kiel, Mannheim and Zurich for their willingness to provide rapid and very accurate radiocarbon dates.

I am really thankful to Philip Nigst, Marjolein Bosch, and Enza Spinapolice for sharing their expertise and passion in the archaeological world, for their warm friendship, their moments of laughter, and for sharing excellent red wine and special dinners.

Unique thanks to:
Nandini Singh, Sarah Freidline, Daphne Katranides, Tsenka Tsanova, for their love, attention, for their sunny moods, for our girls nights, for their close friendship over those three years,
without you this time spent at MPI would have been as blank as an empty page. Thanks for just being great.

A special thanks to Kornelius Kupczik and Marcello Mannino for their company, sharing their passion of good food and wine with me and my family, Nicolas, Matt, Joseba, Emily, Maura, for having rendered the first years special. Giuseppe, Elisabetta, Raffaella, Giovanna, Monica e Stefano per il loro sempre esserci stati e avermi sempre supportato in questa mia ennesima avventura.

Thanks to my mother and all my family who were always close to me and supported this adventure. (Alla mia Mamma e a tutta la mia famiglia che è sempre stata al mio fianco e mi ha sempre sostenuto in questa avventura.)

Finally, I would like to express special thanks to my husband Bernd. He helped me to concentrate on completing this dissertation and supported me mentally during the course of this work. Without his help and encouragement, this study would not have been completed.

The research presented in this Ph.D. thesis was carried out at the department of Human Evolution, at Max-Planck Institute Leipzig, and was funded by the Max-Planck Society.
