Title: Unraveling the glucocorticoid receptor pathway in zebrafish

Issue Date: 2012-06-26

Acknowledgements

For me, this book constitutes the end point of a journey into biological research that started with my first internship as a Biology Bachelor student back home in Athens. Hence, I want to start by acknowledging Dr. Eirini Kefalogianni and Prof. Catherin Gaitanaki for introducing me into the lab bench work and for teaching me how to present data to an audience.

Next stop was my first internship for my Master's degree in Neurosciences in Amsterdam. I really want to thank Dr. Sabine Spijker and Martin Loos for their trust in me and their valuable guidance through complicated experimental settings and gene expression outcomes.

I am also very pleased to have met Dr. Carlos Fitzsimons and Dr. Onno Meijer, my two supervisors during my second Master's internship. I am thankful to them for their excellent guidance, as well as for being great teachers and true supporters of me up until now.

Last stop: Molecular Cell Biology Department at Leiden University. A 4-year long contract for working on my favorite molecular guy, the Glucocorticoid Receptor (GR). Scientific research is not a lonely job because it involves many people. Thus, I really want to thank Huma Safdar, Enise Bagci and Özge Aydın, for their hard work during the experiments and significant help with the acquisition of data. Many thanks, especially, to Jeroen Heijmans for setting up the amputation assay and providing us with a thorough data analysis. Additionally, I would like to acknowledge Dr. Oliver Stockhammer and Dr. Annemarie Meijer for their valuable practical guidance with microarray data analysis.

I also feel extremely lucky to have worked with Dr. Peter Schoonheim and Vincenzo Torraca. I am grateful to Peter for being a role model as a scientist for me, for his valuable guidance and practical assistance with experimental settings, his critical view on scientific approaches and for being my mentor and a great guy to talk to about the Economy! As for Vincenzo, I thank him for being exactly what he is, this hard-working, motivated, extremely smart and helpful young guy who greatly contributed in this work!

Many, many, many thanks to all my past and present colleagues at the Molecular Cell Biology Department at Leiden University. My dear Peter, Oliver, Ania, Ralph, Eva, Ewa, Annemarie, Joost, Phil, Fabrice, Michiel, Bjorn, Ruben, Zakia, Chao, Shuning, Erica, Vincenzo, Rohola, Hanan, Wietske, Claudia, Peti, Anita, Saskia, Gabby, Wouter, Evert Jan, Danielle, Yvonne, Ulrike, Davy and Gerda, I thank you so much for all your great practical assistance in the lab all these years, your support with presentations, your input in experiments and most of all for your friendship and the

great atmosphere we had in and outside the lab! Oh guys, you have made it to the number one of my top-five list with my favorite working environments thus far! It has been a pleasure to have met, worked, and been friends with you! Moreover, many thanks to past and present students in our department with whom I shared my office space, long days at work, coffee breaks and trips and who have created a vibrant and intellectually stimulating atmosphere in the lab! Additionally, many thanks to the members of the Medical Pharmacology and Molecular Genetics Department at Leiden University who provided me with their practical assistance for setting up experiments.

Furthermore, I would like to thank Ian Uings and my co-supervisor, Dr. Stuart Farrow from the pharmaceutical company GlaxoSmithKline for their significant guidance, critical input and genuine interest in my project.

Moreover, I would like to thank my promotor, Prof. Herman Spalink for his trust in my project and in me, his supervision, valuable guidance, critical input and genuine support. His enthusiasm about science, his openness to new ideas and scientific approaches and his ability to organize the best sushi parties in town have been great contributions for a successful PhD training!

I am also very thankful to my paranymphs, Eleni and Giorgios for standing by me not only on my defense day but whenever I needed them! And of course, I would like to thank my family and friends from Greece and The Netherlands for their constant support, love and understanding over long periods of not having seen each other. I love you and miss you all very much! Σας αγαπάω και μου λείπετε όλοι πάρα πολύ!

Last but certainly not least, I would like to write a few words about my co-promotor, Dr. Marcel Schaaf. Over the course of my PhD, Marcel has been not only the most supportive supervisor I could have wished for but also a true friend. I am grateful and thankful for all his valuable guidance, the things he taught me, his help with setting up assays, our early morning talks about experimental outputs, our late evening chats over science, his corrections, his sense of humor, his kindness, his honesty and his genuine interest in my wellbeing. Oh, Marcel, I am sorry for forgetting your birthday in 2008, for misspelling the name of your football team a few months ago, and for any hard time I might have given you. Oh, I already miss our fellowship of the GR! I will miss you so much my dear Marcel! I wish you all the best with science and personal life!
