Title: The use of technological support in communication disorders: how development of computer-based tools can refine the treatment of motor speech disorders
Date: 2012-09-18
Daniil Umanski was born in Leningrad (St' Petersburg) on 26th September 1979. He has arrived in The Netherlands in the late 1999 in order to embark on his studies at Leiden University. Daniil has completed the Doctoraal degree (the earlier Dutch equivalent to the MSc degree) in Computer Science at the Leiden Institute for Advanced Computer Science (LIACS) in 2006, with a specialization in 'Media-Technology' - the application of computational systems and new digital media for the advance of educational, social, and communication platforms. Thanks to his personal experience with speech impairments, Daniil began to cooperate with speech clinicians, producing for his graduation project a computer game to support children who stutter with performing speech motor training exercises. In order to keep exploring the possibilities of employing interactive media for the support of speech and language therapy, Daniil has applied for a PhD grant within the Mosaic funding program of the Netherlands Organization for Scientific Research (NWO). Having been awarded the NWO grant, Daniil has joined the Leiden University Centre for Linguistics (LUCL) and the Leiden Centre for Brain and Cognition (LIBC) in 2008 in order to conduct the doctoral research project.
