**Author:** Heijstek, Werner  
**Title:** Architecture design in global and model-centric software development  
**Date:** 2012-12-05
List of Illustrations

Figures

1.1 The 4 + 1-view model ................................................. 5
1.2 Example of a UML class diagram ................................. 6
1.3 A recent version of the RUP “hump” diagram .................... 9
1.4 The grounded theory data collection and analysis method – applied to a software project .................................................. 14
1.5 Organization of the four chapters that address RQ1 ............. 17

2.1 BPMN diagram for GSD process description of case “XYZ” .... 26

3.1 Class diagram depicting the structure of the examined effort log files 43
3.2 Effort distribution visualization for project A ....................... 45
3.3 Effort distribution visualization for project B ....................... 48
3.4 Effort distribution visualization for project C ....................... 49
3.5 Effort distribution visualization for project D ....................... 51

4.1 Theoretical framework of software architecture design dissemination 61
4.2 Communication of the software architecture design from the onshore to the offshore location ................................. 68
4.3 Case 3 iteration strategy ................................................ 86

5.1 Excerpt of (anonymized) chain-referral sampling graph of interview respondents ................................................. 94
5.2 Concept relation graph (→ denotes cause and effect) ............ 95
5.3 Contents of an SAD and associated stakeholder interest ........ 99

6.1 Experiment environment ................................................ 112
6.2 Example design .................................................. 115
6.3 Histograms for the amount of correct answers per treatment ........ 120
6.4 Density plot for amount of correct answers per treatment ............ 121
6.5 Density plot for academic experience, industrial experience and Höst experience class of participants ......................... 128

7.1 Overview of case system components ................................ 140
7.2 Frequency of UML diagram type use .................................. 142
7.3 Model metrics and revision count over time ............................... 146
7.4 Project effort distribution on phase and model level ................. 147
7.5 Effort and duration per phase (normalized at 100 percent). The black line represents the case. The dotted gray line in the background represents the average for a set of 17 projects similar in size and complexity ........ 148
7.6 Software configuration and change management system usage ........ 152
7.7 Cumulative defect discovery over time (case is labeled “Project Alpha”) .................................................. 154

8.1 Factor integration graph (→ denotes cause and effect) .................. 163
8.2 MDD versus non-MDD maintenance (adapted from Van Vliet, 2008) 171

9.1 Cause-effect diagram integrating the main findings of the study ........ 180

Tables

1.1 MDD provides a common language that augments the individual representations each software engineering stakeholder uses .......... 10

2.1 Organizations Under Study ........................................... 24
2.2 Comparison of GSD process descriptions ................................ 29
2.2 Comparison of GSD process descriptions (continued) ............... 30
2.2 Comparison of GSD process descriptions (continued) ............... 31
2.3 Approach to Process Description Use .................................. 33

3.1 Project Characteristics .................................................. 44

4.1 Interview Questions as Derived from Theoretical Framework (Figure 4.1) 63
4.2 Case Characteristics .................................................... 66

5.1 Overview of expert interview respondent characteristics ............. 93

6.1 Experiment Variables .................................................. 110
6.2 Media Dominance ...................................................... 116
