Title: Prothrombotic factors and the risk of myocardial infarction and ischaemic stroke in young women : differences, similarities and implications

Issue Date: 2013-02-05

The background of the entire page is an abstract, textured pattern of brushstrokes. The colors range from light, airy blues to deep, dark blues, with some white highlights. The strokes are thick and expressive, creating a sense of movement and depth. The overall effect is reminiscent of a close-up of a painting or a piece of fabric with a complex, woven texture.

Prothrombotic factors and the risk of myocardial infarction and ischaemic stroke in young women

differences, similarities and implications

Bob Siegerink

The research presented in this thesis was performed at the Department of Clinical Epidemiology and the Einthoven Laboratory for Experimental Vascular Medicine of the Leiden University Medical Center, Leiden, The Netherlands.

The research presented in this thesis was supported by grants from the Netherlands Heart Foundation, The Netherlands, (grant 1997.063, 2001.069 and 2005B060), the Prevention Fund, The Netherlands, (no. 28-2879), and the Leducq Foundation, France, for the development of Transatlantic Networks of Excellence in Cardiovascular Research (grant 04 CVD 02).
