**Author:** Schramm, Sebastian Markus  
**Title:** Imaging with aberration-corrected low energy electron microscopy  
**Issue Date:** 2013-04-25
ACKNOWLEDGMENTS

This thesis is the outcome of four years of research. This work has profited from contributions of numerous people.

I thank Rudolf Tromp and Sense Jan van der Molen for their professional support and guidance during the last four years.

I thank Jim Hannon (IBM T.J. Watson Research Center, Yorktown Heights) for sharing his expert knowledge in Monte Carlo simulations as well as for his help and support during the LEEM/LEED experiments on Si(111) and SiC(0001).

I thank Ruud van Egmond (Fine mechanical department at Leiden University) for his help with the design of the cryogenic LEEM and for machining most of the parts for the cryogenic LEEM as well as for his help during the installation of ESCHER. I thank Gijsbert Verdoes (Fine mechanical department at Leiden University) for designing and building the vacuum-insulated liquid nitrogen Dewar. I thank Daan Boltje (Leiden University) for his help and support during designing and testing of the cryogenic LEEM set-up and for his help with the Dutch summary. I thank Marcel Hesselberth (Leiden University) for his help and support during designing and testing of the cryogenic LEEM set-up. I thank Giorgio Frossati (Leiden Cryogenics), Jan van der Walt (Leiden Cryogenics), and Joep Teske (Leiden Cryogenics) for their help and support in making the flexible copper foil thermal link. I thank Mario Donat (ANKA-Draht Insinger KG) for providing a free sample of flexible copper braids.

I thank Oliver Schaff (SPECS GmbH) for his support and help during installation of ESCHER, for sharing his expert knowledge about LEEM as well as for his help with respect to low-temperature design questions. I thank Stefan Schmitt (SPECS GmbH), Holger Bechtold (SPECS GmbH) for their help and support with respect to low-temperature design questions and the high-stability power supply for the high-temperature superconducting coil. I thank Andreas Berghaus for his help and support with LEEM related questions. I thank Axel Kortschack (SmarAct GmbH) and Christoph Raß(SmarAct GmbH) for a fruitful collaboration that yielded piezo actuators compatible with a liquid nitrogen cooled environment.

I thank Christian Glass, Manohar Kumar, Monica Morales, Constant Guedon, Anne France Beker, Mohammed Saghir and Roel Smit for being great colleagues.

Finally, I thank my family for all their support.
CURRICULUM VITÆ

Sebastian Markus SCHRAMM

28-03-1982 Born in Stuttgart, Germany.

EDUCATION

2002–2008 Diploma studies in Physics
University of Stuttgart, Stuttgart, Germany

Max Planck Institute for Metals Research, Stuttgart, Germany

2009–2013 Ph.D. research in Physics
Leiden University, Leiden, The Netherlands

2013 Ph.D. thesis
Imaging with Aberration-Corrected Low Energy Electron Microscopy
Leiden University, Leiden, The Netherlands
Promotor: Prof. dr. ir. R. M. Tromp
Co-Promotor: Dr. ir. S. J. van der Molen
