The power of biotic ligand models:

Site-specific impact of metals on aquatic communities

Proefschrift

ter verkrijging van
de graad van Doctor aan de Universiteit Leiden,
op gezag van de Rector Magnificus Prof. mr. C. J. J. M. Stolker,
volgens besluit van het College van Promoties
te verdedigen op woensdag 4 december 2013
klokke 16:15 uur.

door

Aletta Johanna Verschoor

geboren te Den Helder

in 1964

Promotiecommissie:

Promotor: Prof. dr. G. R. de Snoo

Co-promotors: Dr. ing. M.G. Vijver

Dr. ir. J.P.M. Vink

Overige leden: Prof. dr. E. van der Meijden (Universiteit Leiden)

Prof. dr. A.J. Hendriks (Universiteit Nijmegen)

Prof. dr. R. Blust (Universiteit Antwerpen)

Dr. C.A.M. van Gestel (Vrije Universiteit Amsterdam)

This study was financed by Deltares and was conducted at the Department of Subsurface and Groundwater Quality at Deltares in Utrecht, at the Department of Conservation Biology of the Institute of Environmental Sciences (CML) of Leiden University and at the Laboratory for Ecological Research of the National Institute for Public Health and the Environment (RIVM) in Bilthoven, The Netherlands.

Contents

Chapter	Page
1 Introduction: Metals in the aquatic environment	7
2 Multimetal accumulation in crustaceans in surface water related to body size and water chemistry	19
3 Field validation of biotic ligand models. The impact of multimetal exposure on <i>Daphnia magna</i>	47
4 Spatial and temporal variation of water type-specific no-effect concentrations and risks of Cu, Ni and Zn	69
5 Simplification of biotic ligand models of Cu, Ni and Zn by 1-, 2- and 3-parameter transfer functions	89
6 Discussion	105
References	121
Summary	131
Nederlandse samenvatting	137
Acknowledgements	143
Curriculum	145
Bibliography	146

Sampling equipment for monitoring of chemical water quality (Beeldbank RIVM)
