The handle [http://hdl.handle.net/1887/22891](http://hdl.handle.net/1887/22891) holds various files of this Leiden University dissertation

**Author:** Gouw, Stijn de  
**Title:** Combining monitoring with run-time assertion checking  
**Issue Date:** 2013-12-18
# List of Figures

1.1 First version of a base class B .................................. 6  
1.2 New version of a base class B .................................. 7  
1.3 Subclass of the base class ....................................... 7  
1.4 Multi-Threaded Programs ........................................ 7  

2.1 Methods of the BufferedReader Interface .................... 24  
2.2 Communication view of a BufferedReader .................... 24  
2.3 Global communication view ..................................... 27  
2.4 Context-Free Grammar which specifies that ‘read’ may only be called in between ‘open’ and ‘close’. .......... 28  
2.5 Attribute Grammar which specifies that ‘read’ may only be called in between ‘open’ and ‘close’, and the reader may only be closed by the object which opened it. ........................................ 31  

3.1 Generic Tool Architecture ....................................... 40  
3.2 Run-time environment of successful method invocation ........................................ 43  
3.3 Run-time environment of successful method invocation ........................................ 44  
3.4 Aspect for the event ‘call int read(char[], cbuf, int off, int len)’ ........................................ 47  

5.1 Stack Interface .................................................... 52  
5.2 Communication View of a Stack .................................. 53  
5.3 Abstract Stack Behavior .......................................... 53  
5.4 Attribute Grammar Stack Behavior ............................. 54
