F.M. Engelaer, D. van Bodegom and R.G.J. Westendorp. Limits to the compression of human mortality. (Submitted)

F.M. Engelaer, D. van Bodegom and R.G.J. Westendorp Hypotension is more risky than hypertension in the very old people. *BMJ* 2012;344:e721. (Letter)

* Both authors contributed equally to this work
ACKNOWLEDGEMENTS
ACKNOWLEDGEMENTS

First of all I would like to thank all my colleagues of the Leyden Academy. The stimulating environment has not only resulted in this thesis, but it has been an exceptional experience to see the Leyden Academy grow from the very first beginning. Our lunches and drinks together made it feel like being part of a one big family. Herbert, Yuliya, Thomas and Frank, thank you for all the fun and support during the last years in which you have been great room mates. Jolanda, thank you for being such a great example to me. Ineke, I have learned so many things from you; both about professional and private life, but most of all I enjoyed our creative pastime very much.

The research in this thesis, was not possible without the help of many. I would like to thank all the people living in the Garu-Tempane district in the Upper East region in Ghana and the Ghana research team, for their dedicated work in the field. Daniel, Awel, Justice, Pascalina, Lizzy, John A, John B, Thomas, Dent, Moses and Sebastian, many thanks to all of you! Ulrika, our time in Ghana has been a life-time experience. Thank you for your enthusiasm, assistance and support, but most of all for a great time together!

After having performed all the verbal autopsies in the field, there was a need to assign the causes of death. This was a huge amount of work and never possible without the great help of Shiva, Francesca, Raúl and Anna, who worked many hours to assign the causes of death. Anna, I would like to mention you again. We started Medical School together and from that time onwards worked as a team. Thank you for being a great companion!

During the last years, I have worked together with several students. Frank & Ruben, thank you for your dedicated work and enthusiasm. Anouk and Ferestha, we have worked hard together with Frans van Poppel and Govert Bijwaard from the Netherlands Interdisciplinary Demographic Institute (NIDI), with great success. Inge and Aida, at this moment we are still working on a historical analysis, I am sure this will be a success too. Julia, thank you for all your hard work during your scientific internship, it was great working with you.

All colleagues and former colleagues from the department of Geriatrics and Gerontology from the Leiden University Medical Center, many thanks for all the scientific discussions and beyond. I have learned a lot during those years from all of you. Stella, Carolien and Liselotte, it has been great to meet for a drink while sharing our thoughts together. Maarten and Peter, I have learned a lot from both of you and enjoyed all our discussions.
Behnam, I am very happy that you came all the way to the Netherlands so that we became colleagues and friends. Bart, you have been a great inspiration and I enjoyed working together with you.

Furthermore, I would like to thank all my friends and family who have been patient and supportive during the last four years. Melissa, thank you for checking my English writing! Juud, Mees, Kris en Nouk, many thanks for all the dinners and support. Also, I would like to thank my soccer team, playing together has been a great way to reset my brain. Lonneke, you know what you mean to me and I hope we will reach a 100 together!

Dieuwke and Maarten, thank you for all your support and interest in my work. Peter en Gerda, you have supported me during my studies and were always interested in my work, many thanks for that. Liesbeth, many thanks that you were willing to help me with the cover of this thesis. Wytze, it is a great privilege having a mentor like you in life, thank you for all you have done for me. Dear Nellie and Nico, lieve mam en pap, many thanks for being there for me whenever I needed you. Dear Cis, thank you for all the moments and thoughts we have shared together. Cher Alpha, je suis très heureuse que je t’ai rencontré et que tu es rentré dans notre famille. Dear Lidwine, Andreas, Selene en Elise, having you all as part of my family is one of the greatest treasures in life. Dear Lukas, Mathilde and Jula thank you for all your support, the way you live together is a great example to me. Last but not least Daan, you gave me the strength and liveliness at all times. Sharing all our thoughts, dreams and adventures is a wonderful inspiration.
CURRICULUM VITAE
Frouke Maria Engelaer was born on the 7th of March 1985 in Bergen (NH), the Netherlands. From 1999-2004 she attended the Vrije School Zeist, where she finished her VWO degree. After working for one year in Berlin, Germany she studied medicine at the Leiden University Medical Center, where she received her doctoral degree (cum laude) in 2010. She followed a short internship in Montpellier Lapeyronie hospital in France, after which she started working at the Leyden Academy on Vitality and Ageing. During her PhD she followed the 1-year master Vitality and Ageing, for which she graduated in 2011. She is currently finishing her internships to obtain her Medical Degree (MD) at the Leiden University Medical Center, for which she is expecting to graduate in the summer of 2015.
