Author: Krijt, Sebastiaan

Title: From grains to planetesimals: the microphysics of dust coagulation

Issue Date: 2015-04-29

From grains to planetesimals

the microphysics of dust coagulation

© 2015, Sebastiaan Krijt

ISBN: 978-94-6259-630-6

Printed by Ipskamp Drukkers

Cover: Dust aggregates growing above Prague. Background image credit: ALMA (ESO/NAOJ/NRAO)/M. Kornmesser (ESO)

From grains to planetesimals the microphysics of dust coagulation

Proefschrift

ter verkrijging van
de graad van Doctor aan de Universiteit Leiden,
op gezag van de Rector Magnificus prof. mr. C. J. J. M. Stolker,
volgens besluit van het College voor Promoties
te verdedigen op woensdag 29 april 2015
klokke 13.45 uur

door

Sebastiaan Krijt

geboren te Leidschendam, Nederland
in 1987

Promotiecommissie

Promotores: Prof. dr. A. G. G. M. Tielens
Prof. dr. C. Dominik

Overige leden: Prof. dr. H. J. A. Röttgering
Prof. dr. T. Henning
Prof. dr. C. P. Dullemond
Prof. dr. H. Tanaka
Dr. M. R. Hogerheijde

“I believe that we do not know anything for certain, but everything probably.”
– Christiaan Huygens

Contents

1	Introduction	9
1.1	Overview of the planet formation process	11
1.2	From dust to planetesimal	19
1.3	Dust microphysics	23
1.4	This thesis	29
2	Energy dissipation in head-on collisions of spheres	31
2.1	Introduction	32
2.2	Contact model	33
2.3	Head-on collisions	38
2.4	Comparison to experiments	43
2.5	Discussion	50
2.6	Conclusions	52
2.A	Quasi-static limit	53
2.B	Initial condition for contact area	54
2.C	Energy budget during collision	54
2.D	Fits	57
3	Rolling friction of adhesive microspheres	61
3.1	Introduction	62
3.2	Theory of rolling friction	63
3.3	Comparison to experiments	69
3.4	Discussion	73
3.5	Conclusions	76
4	Erosion and the limits to planetesimal growth	79
4.1	Introduction	80
4.2	Disk and dust models	81
4.3	Monte Carlo approach	91

4.4	Results	95
4.5	Semi-analytical model	105
4.6	Discussion	107
4.7	Conclusions	111
5	A panoptic model for planetesimal formation	113
5.1	Introduction	114
5.2	Method	115
5.3	Planetesimal formation through coagulation	120
5.4	Planetesimal formation through SI	130
5.5	Discussion	135
5.6	Conclusions	139
5.A	Particle stopping time	141
5.B	Particle relative velocity	141
5.C	Particle porosity evolution	142
6	A dearth of small particles in debris disks	145
6.1	Introduction	146
6.2	Minimum fragment size in a single collision	146
6.3	Application to debris disks	149
6.4	Discussion	152
6.5	Conclusions	153
6.A	Applicability to aggregates	153
6.B	Collisions with different mass ratios	154
7	Summary and outlook	157
7.1	Collisions	157
7.2	Modeling coagulation	158
7.3	Growth barriers and planetesimal formation	158
7.4	Realistic disks and opacities of porous grains	159
	Bibliography	161
	Curriculum vitae	171
	List of publications	173
	Nederlandse samenvatting	175
	Acknowledgements	181
