Title: Automata-theoretic protocol programming : parallel computation, threads and their interaction, optimized compilation, [at a] high level of abstraction

Issue Date: 2016-03-03

Automata-Theoretic Protocol Programming

Parallel Computation,
Threads and Their Interaction,
Optimized Compilation,
[at a] High Level of Abstraction

Proefschrift

ter verkrijging van
de graad van Doctor aan de Universiteit Leiden,
op gezag van Rector Magnificus Prof. Mr. C.J.J.M. Stolker,
volgens besluit van het College voor Promoties
te verdedigen op donderdag 3 maart 2016
klokke 15:00 uur

door

Sung-Shik Theodorus Quirinus Jongmans
geboren te Seoul, Zuid Korea,
in 1987

Promotor

prof. dr. F. Arbab

Promotiecommissie

prof. dr. C. Baier

Technische Universität Dresden

prof. dr. F.S. de Boer

dr. M.M. Bonsangue

prof. dr. H.J. van den Herik (secretaris)

prof. dr. J.N. Kok (voorzitter)

dr. A. Silva

University College London

The work in this thesis has been carried out at CWI (Centrum Wiskunde & Informatica) and Universiteit Leiden, under the auspices of the research school IPA (Institute for Programming research and Algorithmics).

Contents

1	Introduction	1
1.1	Context	1
	The Protocol Concern	1
	Today's Abstractions	5
1.2	Problem	9
	Three Major Issues	9
	Partial Solutions	16
1.3	Contribution & Organization	17
	Abstract Proposal	17
	Concrete Instantiation	22
2	DSL for Interaction I: Semantics	27
2.1	Theory	29
	Interaction Languages	29
	Constraint Automata	32
	Behavior, Equivalence, and Congruence	39
	Multiplication and Subtraction	42
2.2	Practice	48
3	DSL for Interaction II: Syntax	51
3.1	Theory	53
	Compositional Construction of Constraint Automata	53
	Graphical Representation: Reo	56
	Textual Representation: FOCAML	61
3.2	Practice	72
	Editor	72
	Example I: OddFibonacci	74
	Example II: Chess	76
	Example III: NAS Parallel Benchmarks	79
4	Basic Compilation	93
4.1	Theory	95
	Basics	95
	Distributed Approach	98

CONTENTS

Centralized Approach	101
Distribution versus Centralization	101
4.2 Practice	104
Compiler	104
Run-Time Library	105
Compiler-Generated Code	110
API for Ports	117
Experiments I: Protocols	121
Experiments II: Programs	124
5 Improved Compilation I: Local Multiplication	125
5.1 Theory	127
Hybrid Approach	127
L-Multiplication	130
First Characterization	133
Cheaper Characterization	134
Practical Characterization	138
Related Work on Distributed Coordination	140
Nonassociativity	141
5.2 Practice	149
Compiler	150
Experiments I: Protocols	151
Experiments II: Programs	156
6 Improved Compilation II: Syntactic Subtraction	173
6.1 Theory	175
64 Syncs	175
Normalization	176
Syntactic Subtraction	178
6.2 Practice	182
Compiler	182
Experiments I: Protocols	183
Experiments II: Programs	186
7 Improved Compilation III: Commandification	201
7.1 Theory	203
Data Commands	203
Commandification	207
Commandification with Cycles	212
Commandification in Constraint Automata	217
7.2 Practice	221
Compiler	221
Experiments I: Protocols	221
Experiments II: Programs	224

CONTENTS

8 Improved Compilation IV: Queue-Inference	237
8.1 Theory	239
Manual Optimization	239
Multiconstraint Automata	243
Operations on Multiconstraint Automata	247
Homogenization	254
8.2 Practice	258
Compiler	258
Experiments I: Protocols	259
Experiments II: Programs	261
9 Conclusion	275
9.1 Summary	275
9.2 Future Work	292
Abstract	295
Curriculum Vitae	299
Bibliography	301
Index	325
