Author: Deen, Welmoed Kirsten van
Title: Value-based health care in inflammatory bowel diseases: creating the value quotient
Issue Date: 2016-03-15
Addendum

Acknowledgments

Despite the fact that my name only appears on the cover of this thesis, many others have contributed a great deal to this work. First and foremost I would like to express my gratitude to my advisor Daan Hommes. You were there with inspirational words during the good times and the bad, and showed me that everything is possible. You opened up a whole new world of science and innovation to me, for which I thank you deeply. I would also like to thank my co-advisors Martijn van Oijen and Roeland Veenendaal. Martijn, you showed me what rigorous science looks like. I am extremely grateful for all your feedback and support during our weekly phone conferences which greatly contributed to this final product. Roeland, your continuous support from our home-base in Leiden was of much value to me, thank you.

Without the contributions of all the members of the IBD team at UCLA, none of this would have been possible. Leticia, Tony, Adriana, Angelos, Ellen, Laurin, Liz and Liz, Tina, Jennifer, Christine, Jay, Dipti, Precious, and Tamera: thank you for the mental support, the hard work on our mutual projects, and the friendship. A special thank you goes to my smart and hard-working students: Aria, Courtney, Anya, and Natalie. It was very inspiring to see all of you grow on your paths towards no doubt successful careers and I have sincerely enjoyed working with you. I also would like to acknowledge all the physicians, nurses, administrative personnel, and students at UCLA, UC Irvine, and Leiden University that were involved in the mH1 study. In particular I thank Andrea van der Meulen and Nimisha Parekh for running the study in Leiden and in Irvine. Hein Verspaget and Lokke Stevens, my point persons in Leiden, deserve a special mention as well for helping with all the logistics of writing a Leiden thesis in Los Angeles.

Over the last four years I have met countless people who greatly enriched my life and helped me through times in which I was frustrated or upset. Specifically I would like to mention the Hommes family, all my past and current roommates at both Kelton houses, all my teammates at the LA Rowing Club, and my dear friend Christina. Christina, ever since we met in Boston years ago I have been able to count on you - thank you for being a great friend. In The Hague I’d like to thank my good friends Sophie and Yvonne for staying closely in touch, despite the 9,000 kilometers between us.

This thesis would not have looked the same without the help of a several people. Michèle and Oscar, thank you for designing the cover - the result is fantastic. Natalie, thank you for taking on the tedious task of finalizing the layout of the inside work. I’d also like to mention my paranimphen, Merlijn and Rutger: I am honored to have you by my side during my PhD defense. Merlijn, it was enlightening to go through the motions of starting and finishing a PhD at the same time and to talk about research, careers, and life. Rutger, the time we spent both inside and outside of UCLA during the six months that you worked and lived in LA was irreplaceable.
Mathieu, thank you for your love, trust, and encouragement over the last months. Meeting you is most definitely one of the best things that happened to me in LA. Lastly I want to thank my parents Hansje and Jurjen for supporting my move abroad and for being there for me while far away. Our many chats by phone and in person made me feel loved and supported. Thank you for your confidence in me.

CV

Welmoed Kirsten van Deen was born on January 10, 1987 in The Hague, The Netherlands. After finishing her secondary education at the Gymnasium Haganum in The Hague, The Netherlands, she started her undergraduate studies in biomedical sciences at Leiden University, The Netherlands in 2004. After receiving a B.S. in biomedical sciences in 2007 she enrolled in medical school at Leiden University, The Netherlands. During medical school she spent three months in Zambia and three month in Tanzania, and received her M.D. in December, 2011 after doing her final clinical rotation in the Department of Gastroenterology and Hepatology at the Leiden University Medical Center.

Welmoed started her Ph.D. project in January, 2012 under the supervision of Professor Daniel W. Hommes. After receiving three months of research training at the Department of Gastroenterology and Hepatology at the Leiden University Medical Center she moved to Boston, Massachusetts in the United States, where she worked in the lab of Dr. Dimitrios Iliopoulos at the Dana Farber Cancer Institute at Harvard University. In July, 2012 she started her work in value-based health care at the Center for Inflammatory Bowel Diseases at the University of California, Los Angeles in the United States. Welmoed is a member of the International Consortium for Health Outcomes Measurement (ICHOM) Inflammatory Bowel Diseases Working Group, in which she works with a team of leading experts to develop an internationally recognized set of outcome metrics for inflammatory bowel diseases. After receiving her Ph.D., Welmoed aims to assume a research position in which she can make a positive change in national and international health care delivery.
