**Author:** Pelt D.M.

**Title:** Filter-based reconstruction methods for tomography

**Issue Date:** 2016-05-03
Daniël M. Pelt was born in Utrecht in 1986 and completed his secondary education (gymnasium) in 2004 at the Christelijk Gymnasium Utrecht. In 2008, he obtained his bachelor’s degree in Physics and Astronomy from Utrecht University. He obtained his master’s degree (cum laude) in Mathematics from Utrecht University in 2010, writing a thesis entitled “Matrix Partitioning: Optimal bipartitioning and heuristic solutions” under supervision of prof. dr. R. H. Bisseling. After graduating, he worked as a Scientific Programmer at the department of Biological Psychology of VU University in Amsterdam, developing software for the analysis of behavioral and physiological data. In 2012, he started as a PhD student at Centrum Wiskunde & Informatica in Amsterdam, under supervision of prof. dr. K. J. Batenburg. As part of his PhD research, he made extended visits to experimental facilities in France, Switzerland, and Illinois (USA), and presented his work at international workshops and conferences in Ghent, Hong Kong, Phoenix (AZ), Milan, Newport (RI), and London, among others. He is currently employed as a researcher at Centrum Wiskunde & Informatica.
Acknowledgments

This thesis is the result of four years of work, during which I enjoyed the support and help of many people. Here, I would like to express my gratitude to some people in particular.

First and foremost, I would like to thank my supervisor and promotor Joost Batenburg. Your comments and suggestions on how to improve my scientific work have been extremely useful, and I enjoyed the many discussions that we had. Furthermore, I want to thank you for allowing me to work in a way that was the most fitting for me, and for providing the contacts and opportunities to visit other groups and attend conferences and workshops in the Netherlands and abroad.

I would like to thank my colleagues at CWI for creating a stimulating and friendly work atmosphere, which is an important prerequisite for writing a thesis. In particular, I want to thank the people of the tomography group: Jeroen Bédorf, Folkert Bleichrodt, Wagner Fortes, Tristan van Leeuwen, Willem Jan Palenstijn, Linda Plantagie, Paul de Zeeuw, Zhichao Zhong, and Xiaodong Zhuge. The many tomomeetings, fun side projects, and trips together were definitely one of the most enjoyable parts of my PhD project. Special thanks go out to my office mates Folkert Bleichrodt and Jeroen Bédorf for the interesting discussions and for putting up with the growing collection of souvenirs polluting my desk.

This thesis could not have been written without the help of the supporting staff of CWI, especially Nada Mitrovic and Duda Tepsic, for which I am very thankful. I owe thanks to my master thesis supervisor Rob Bisseling for putting me in contact with my PhD supervisor, and for our enjoyable Friday afternoon talks about many different topics. I am also grateful for having had the opportunity to meet many kind people in the international tomography community, with whom I hope to stay in contact in the future. In particular, I would like to thank the people who collaborated with me to produce the work presented in this thesis: Sara Bals, Eva Bladt, Francesco De Carlo, Doğa Gürsoy, and Jan Sijbers.

During my PhD project, I have had the pleasure of enjoying the company of my friends and family. I want to thank my friends and brothers for the many fun evenings, nights, and weekends, which gave me much-needed distractions from my PhD work. I would also like to thank my parents for giving me my curiosity and allowing it to develop during my childhood. I am forever grateful to my mother for her incredible strength and perseverance when faced with the daunting task of raising three boys after my father had passed away.

Finally, I want to give my most special thanks to Hilde for making the process of writing this thesis infinitely more enjoyable. Thank you for sharing your love of traveling with me and reminding me that there is more to life than PhD work. I am glad that we could be part of each other’s PhD adventures, and I look forward to many more adventures together in the future.
