Prof.dr. T.R. Ottervanger

Promotiecommissie:
Prof.dr. G.P. van Duijvenvoorde
Prof.dr. H.E.G.S. Schneider (Universiteit Maastricht)
Dr. P.J.J.M. Van Cleynenbreugel (Universiteit van Luik, België)
Dr. B. Van Rompuy (Universiteit Leiden en Vrije Universiteit Brussel, België)
ACKNOWLEDGEMENTS

My research topic examines the application of competition law in the information technology market: a topic at the frontier of competition law research in both the developed and developing jurisdictions. My education and research experience in China has equipped me with the capacity to conduct research of such a topic; however, what has enabled me to complete this research and formulate it as a defensible thesis is the help and support I have received from many people and institutions, to which I wish to hereby express my gratitude.

Prof Tom Ottervanger agreed to supervise my research in summer 2010. He devoted valuable time to my tuition. His trust and the freedom he gave to me enabled me to complete this research. His tuition, which is based on his extensive experience in court decision-making, the private enforcement of competition law, and scholarly research, guarantees the originality and high academic value of my thesis.

Prof Stefaan Van den Bogaert joined as my second supervisor soon after I arrived in Leiden. His tuition is rigorous and he expects my writing to meet not only the level of a defensible thesis in Leiden Law School, but also the level of academic excellence. He offered me several comments and suggestions on the revision of a few drafts. All of his efforts dedicated to my progress were invaluable.

My parents were pleased that I chose to conduct my PhD research in the Netherlands. They provide me with love and patience. With their support, I have been able to continually focus on this comparatively time-consuming research project.

I extend my sincere gratitude to the members of the thesis committee, who are responsible for reading and reviewing my thesis.

There were several people who offered encouragement and support during my writing in Leiden. Prof Christa Tobler is a respectful scholar and friend; I benefited greatly from our random exchanges. Elizabeth Beumer helped me to become familiar with local life and provided me with much valuable information on academic writing. Florian Theissen shared his experience in thesis writing with me. Prof Yuwen Li (professor of law Erasmus University Rotterdam) provided me with valuable practical information in undertaking a PhD in a Dutch law school; she also encouraged me to progress forward. All of my exchanges with the above friends contributed to my research and life tremendously.

My research also benefits from people and institutions outside the Nederlands. Prof Guangyao Xu (professor of law Nankai University) provided me with many insightful
suggestions at the beginning of this research. During my writing of the chapter on a developing country (China), we had many stimulating discussions.

My research received support from the Max Planck Institute for Intellectual Property and Competition Law. In Munich, I am able to access many books that were not available in Leiden University Library. I also benefitted from exchanges with some of my colleagues who were conducting research on similar topics.

The final step of completing my thesis was undertaken in the Skolkovo Institute for Law and Development — National Research University Higher School of Economics, where I was employed as a research fellow. In Moscow, I completed my thesis, expanded my expertise, and worked with the following scholars: Lianos Ioannis, Ivanov Alexey, Bashkatov Maxim, Galkova Ekaterina, Molodyko Kirill, Nadmitov Alexander, Sivitsky Vladimir, Sushkevich Alexey, Voinikanis Elena, Lombardi Claudio.

Finally, many thanks to the other people and friends I met before and during my research, all of whom will be pleased to see the completion of my research and further achievements in my future academic life.
TABLE OF CONTENTS

PART I: INTRODUCTION .......................................................2
  I. Competition Law Application in the Software Industry ...................3
  II. Research Question ................................................................4
  III. Scope of This Research ........................................................5
    A. IDENTIFYING MARKET POWER IN THE SOFTWARE INDUSTRY ....5
    B. Identifying various types of abusive conduct ..............................6
    C. Remedies and competition analysis of various types of abuse .........7
    D. Competition policy and the current status of the developing economy software industry ........8
    E. The Microsoft case ................................................................8
    F. The restriction of the research ...................................................8
  IV. The Aim of This Research ......................................................9
  V. Research Methodology ..........................................................10

PART II: DOMINANT POSITION AND MARKET DEFINITION .........14

CHAPTER 1. SHOULD MARKET DEFINITION BE ABANDONED IN ESTIMATING MARKET POWER? AN AFFIRMATIVE ANSWER FROM QIHOO V TENCENT ....15

  Abstract ...............................................................................15
  I. Introduction ........................................................................15
  II. Market Definition in Determining Market Power — Criticisms and Court Decision .........20
    A. Choosing the relevant market ..................................................20
    B. Market power determination in a redefined market .....................23
    C. Qihoo v Tencen .................................................................26
  III. Choosing The Relevant Market .............................................30
    A. Choosing the relevant market ..................................................30
    B. The HMT/SSNIP mechanism ..................................................32
    C. The unchosen but more “relevant” market ................................33
  IV. Market Power Determination in Redefined Markets and drawing Market Boundaries ........35
    A. Including non-homogeneous products in the relevant market disables market power determination in redefined markets ........36
    B. Including non-homogeneous products in the relevant market blurs market boundaries ........37
    C. Summary of Section IV ........................................................40
  V. Implications for Amending China’s Anti-Monopoly Laws ..................41
    A. Article 19(1) of the AML ......................................................41
    B. Anti-monopoly Committee of the State Council Guidelines on Relevant Market Definition ....43
  VI. Conclusion .........................................................................45
PART III: PRICING PRACTISES IN THE SOFTWARE INDUSTRY ..........................48

CHAPTER 2. SOFTWARE PREDATORY PRICING AND COMPETITION LAW -
ASSESSING BELOW-COST PRICES ................................................................49

Abstract...........................................................................................................49

I. Introduction .................................................................................................49

II. Software Market Conditions ......................................................................51
   A. Software is a network economy ...............................................................51
   B. Software is a durable good ....................................................................54
   C. Software has high fixed costs and low marginal costs .........................55
   D. Software suppliers compete with innovative products .......................55
   E. Summary of Section II ..........................................................................57

III. Predatory Pricing and Its Competition Effect: Theoretical and Legal Fundamentals .................................................................58
   A. Predatory pricing ...................................................................................58
   B. Market conditions for a successful implementation .............................60
   C. Laws targeting predatory pricing ...........................................................62
   D. Cost test used in identifying illegal low price ........................................65
   E. Summary of Section III ........................................................................69

IV. Predatory Pricing of Software ..................................................................69
   A. Loss-leader price ..................................................................................69
   B. Penetration price ..................................................................................72
   C. Learning by doing ...............................................................................75
   D. The unjustified below-cost price ............................................................78
   E. A suggested approach to analysing predatory pricing in the software market .................................................................80
   F. Summary of identifying software predatory pricing .............................83

V. Conclusion ................................................................................................83

CHAPTER 3. DISCRIMINATORY PRICING IN SOFTWARE SALES AND
COMPETITION LAW: MORE EFFICIENCY THAN HARM? .........................85

Abstract...........................................................................................................85

I. Introduction .................................................................................................85

II. Discriminatory Pricing Theory Practised in Traditional Markets ..........87
   A. Price discrimination and competition in relevant market .....................87
   B. Price discrimination and competition law .............................................88
   C. Analysing negative competitive effects in traditional markets in the European Union .................................................................89

III. The Software Market ................................................................................91
   A. Software production is high in fixed costs and low in marginal costs ....92
   B. The software market has network effects .............................................92
   C. A software product is a durable good ..................................................94
   D. Innovation, price and competition .......................................................95
   E. Summary of Section III .......................................................................96

IV. Competition Impact of Discriminatory Pricing of Software ..................96
A. Discriminatory pricing practises ................................................................. 97
B. Competition impact .................................................................................. 101

V. Possible Competitive Injury of Discriminatory Pricing and Cost Floors in The Software Market ... 102
A. Competitive injury from discriminatory pricing of software identified in the US ................. 102
B. Cost test used in analysing the legality of a price in the EU and the US ............................ 104
C. Summary of Section V ............................................................................. 107

VI. Implications for the Competitive Treatment of Software Sales ................................. 107
A. Software discriminatory pricing is often based on efficiency ................................. 107
B. The LAIC price test should be adopted when assessing software pricing practises ......... 107

VII. Conclusion ............................................................................................. 108

CHAPTER 4. SOFTWARE RESALE PRICE MAINTENANCE AND COMPETITION LAW .................. 111
Abstract ........................................................................................................ 111

I. Introduction .............................................................................................. 111

II. Legal Rule Against Resale Price Maintenance .................................................. 113
A. Resale price maintenance ........................................................................... 113
B. Resale price maintenance and free riding .................................................. 114
C. Legal rules against resale price maintenance .............................................. 116
D. Summary of Section II ................................................................................ 119

III. Software Resale Price Maintenance and Competition Law ................................. 119
A. RPM, distribution competition and innovation competition in the software market .......... 119
B. RPM and consumer welfare in the software market ....................................... 122
C. RPM and free riding in software retail ....................................................... 124
D. Minimum advertised price in software retail .............................................. 124

IV. Conclusion .............................................................................................. 126
Summary of PART III .................................................................................... 127

PART IV: NON-PRICING PRACTISES IN THE SOFTWARE INDUSTRY ........................................ 128

CHAPTER 5. SOFTWARE INTEROPERABILITY INFORMATION DISCLOSURE AND COMPETITION LAW .............................................................. 129
Abstract ........................................................................................................ 129

I. Introduction .............................................................................................. 129

II. Legal Background and Policy on Software Interoperability Information Disclosure ........ 131
A. Competition rules on compulsory accessing intellectual property law protected work .......... 131
B. Compulsory disclosure of software interoperability information .......................... 144

III. Software Interoperability Information Disclosure and Its Competition Effect ................ 150
A. Compulsory disclosure of software interoperability information and its effect on competition in
the software market ........................................................................................................ 150
B. Consumer welfare affected by the compulsory disclosure of software interoperability
information.................................................................................................................. 153
C. Reverse engineering of interoperability information and competition .......................... 155
D. Refusals to disclose software interoperability information as abuse of market dominance that
subject to compulsory disclosure .............................................................................. 156

IV. Conclusion .................................................................................................................. 163

CHAPTER 6 TECHNICALLY TYING APPLICATIONS TO A DOMINANT
PLATFORM IN THE SOFTWARE MARKET AND COMPETITION LAW ........... 165

Abstract .......................................................................................................................... 165

I. Introduction .................................................................................................................... 165

II. Technically Tying Applications To A Platform in The Software Market ......................... 167
   A. Technical tying differs from contractual tying and product design from competition law
      perspective ................................................................................................................. 167
   B. Tying applications to a platform differs from horizontal tying .................................. 169
   C. Summary of Section II ............................................................................................ 171

III. The Microsoft Technical Tying Cases .................................................................... 171
   A. The US Microsoft case ......................................................................................... 171
   B. The EU Microsoft case ....................................................................................... 173
   C. The South Korean Microsoft case ......................................................................... 174
   D. Summary of Microsoft’s technical tying practises ................................................. 175

IV. Microsoft’s Defences and Court Holdings ................................................................ 176
   A. Microsoft argued that it possessed no monopoly power ...................................... 176
   B. Microsoft argued that Windows and IE were not separate products ...................... 178
   C. Microsoft denied that technically tying IE to Windows resulted in a foreclosure of
      competition .............................................................................................................. 182
   D. Microsoft claimed that consumer coercion did not arise from its technical tying practises...... 184
   E. Microsoft claimed that its technical tying practises were based on efficiency .......... 186
   F. Microsoft claimed that its competitors also tie applications to platform software .......... 188
   G. Summary of Section IV ......................................................................................... 190

V. Conclusion .................................................................................................................... 190

CHAPTER 7 EXCLUSIVE DEALING AND ‘COMPETITION ON THE MERITS’ .... 193

Abstract .......................................................................................................................... 193

I. Introduction .................................................................................................................... 193

II. Exclusive Dealing and ‘Competition on The Merits’ ................................................. 195
   A. Chicago School and Post-Chicago School analysis of exclusive dealing .................. 196
   B. Current standard on the legality of exclusive dealing ............................................. 203
   C. Exclusive dealing and ‘competition on the merits’ ................................................. 206

III. Exclusive Dealing and ‘Competition on The Merits’ in The Microsoft Decision ......... 212
   A. Competition for distribution and competition for innovation, co-existence and conflicts .. 213
