Title: Bioorthogonal Antigens

Issue Date: 2017-11-14

Propositions (Stellingen)

Behorende bij het proefschrift

Bioorthogonal Antigens

1. T cell response to peptide epitopes is near homeopathic (Lysis by certain T cells requires 1-10 ligands per target).
Irvine, D.J. *et al.* Nature. 2002, 419: 845-849
2. Antigen cross-presentation is a Frankensteinian amalgam of parts stolen from other cellular processes.
Lin, M.L. *et al.* Immunol. Cell. Biol. 2008, 86(4): 353-62
Blum, J.S. *et al.* Annu. Rev. Immunol. 2013, 31: 443-73
3. The efficiency of bioorthogonal chemistry is limited by non-covalent background interactions, even if the reaction itself is quantitative and fully selective.
Sletten, E.M. *et al.* Acc. Chem. Res. 2011, 44(9): 666-676
Best, M.D. Biochemistry. 2009, 48(28): 6571-84
Dit proefschrift
4. Chemical peptide epitope detection should be as sensitive as that performed by a T cell.
Porgador, A. *et al.* Immunity. 1997, 6(6): 715-26
Dit proefschrift
5. Bioorthogonal antigens may present the key to unlocking the black box between early antigen uptake and the endpoint of cross-presentation.
Dit proefschrift
6. Copper and bioorthogonality: still necessary evils.
Prescher, J.A. *et al.* Nat. Chem. Biol. 2005, 1(1): 13-21
Dit proefschrift
7. The field of cross-presentation is like soccer: competition between research teams with rivalrous supporters that hate each other's guts.
Vyas, J.M. *et al.* Nat. rev. Immunol. 2008, 8(8): 607-18
8. The price of a fluorophore bears no correlation to the complexity of its synthesis.
9. The Eastern European temperament, while with a short fuse, produces much noise, but leaves no lasting damage.
10. Being the first PhD student of a young and ambitious tenure track group leader puts one in the awkward position of being at once an equal sparring partner and a minion.
