9. The restrictor

The “restrictor” (the proclitic element í-) turns adjectival and verbal predicates into attributive modifiers that restrict the reference of the head noun to a subgroup with the properties or qualities expressed by the adjectival or verbal predicate. Verbal predicates with the restrictor function as restrictive relative clauses (see chapter 11).

The restrictor brings a high tone to a following verb in the way described by the rules of Tone Shift (and Tone Reappearance sub-Rules) and Contour Simplification, cf:

\[
\text{pol} \quad p\-\text{parí}
\]
person \quad C-female
the person is female

\[
\text{pol} \quad r\-p\-\text{parí}
\]
person \quad RES-C-female
the woman (the person who is female)

It cannot itself receive a high tone from a preceding element, but it can have a high realization due to tone bridge. In view of these properties I represent it with a high tone: í- (a rising tone would have been possible as well, see 3.8). It has no prepausal realization.

A least some adjectives, however, have a tonal realization that is different from what would be expected, when preceded by the restrictor. Examples include c-\text{ńi} ‘black’, c-\text{ttē} (or c-\text{ttē}) ‘small, little, young’, c-\text{rēj} ‘big, important’ and c-\text{kiṭak} ‘bad’. The restrictor brings a high tone to their initial mora replacing their own tone pattern, as, for example in \text{pol} r-p-\text{rēj} ‘person who is important’. This is, however, not the case for all adjectives (nor for all adjectives with a L.HL or L.H.L tone pattern).

Morpho-phonologically the restrictor behaves in a regular way: when attached to an adjective or verb with +ATR vowels, its realization may change slightly in the direction of a +ATR realization. Preceding an r-initial element a little length is generally retained.
An example with an adjective and a verb phrase preceded by the restrictor follow here:

\[
\text{karet \ 1-k-ípe \ k-á.fl \ cóné}
\]
\[
\text{cloth \ RES-c-old \ c-be:PR \ here}
\]
the old cloth is here

\[
\text{túk \ 1-t-okkwá.t \ t-á.fl \ cóné}
\]
\[
\text{dog \ RES-c-become_old:COMPL \ c-be:PR \ here}
\]
the old dog is here

The following examples concern modification of object nouns through modifiers with and without the restrictor, and placed inside and outside the noun phrase.

\text{corán} ‘stick’ in the first example below in principle allows for a definite as well as an indefinite reading. This is the same when the ‘stick’ is modified by an adjective or verb phrase with the restrictor, provided that this modifier is positioned within the noun phrase, i.e. used attributively (second example below):

\[
\text{k-kw-štúkw.átwé \ córán \ n.ti \ 1-wént}
\]
\[
\text{3-c-grab:PST \ stick \ from \ in-horizontal_bamboos_of_roof}
\]
s/he grabbed a/the stick from the inside of the roof

\[
\text{k-kw-štúkw.átwé \ córán \ 1-c-ópi \ n.ti \ 1-wént}
\]
\[
\text{3-c-grab:PST \ stick \ RES-c-black \ from \ in-horizontal_bamboos_of_roof}
\]
s/he grabbed a/the black stick from the inside of the roof

It is different when the adjective with restrictor is positioned at the end of the clause, outside of the noun phrase. Now, the adjective \text{(icóni ‘black’)} gives a definite reading to the noun \text{(corán ‘stick’)}, identifying it as the black one among other sticks:
The first example below is syntactically comparable to the example above, but lacks the restrictor on the adjective (cɔřɛ ‘red’). Providing some information about the necklace (cucců), namely that it is red, the adjective establishes an indefinite reading of it. Unlike its counterpart with restrictor, an attributive adjective or verb phrase without restrictor is not placed inside the noun phrase, but comes at the end (second example below).

Two examples contrasting a clause with and without the restrictor modifying an object noun follow here. The first is the opening line of a story, introducing the main character, the second identifies a certain jackal amongst others:

I am going to talk about a jackal who organized a cultivating party (‘The story of the jackal’)

I am going to talk about the jackal who organized a cultivating party (implies that there are other jackals who did not organize such a party)
Adjectives which are used independently have the restrictor. In the example below the concord c agrees with corâŋ 'stick':

\[ \text{et-} \text{n} \quad \text{r-c-} \text{ɔ́ɲ} \]
\[ \text{give:imp-01} \quad \text{res-c-black} \]

give me the black one!

The earlier given example with rćɔ́ɲ at the end of the clause in fact allows for a reading like this as well ('s/he grabbed the stick from the inside of the roof, the black one').

The use of the restrictor on adjectives (and numerals) and on relative clauses is further exemplified in the chapters 10 and 11. The restrictor is not used on connexive constructions, possessors and demonstratives, with the exception of the anaphoric demonstrative c-ɛn. r-c-ɛn 'the one' was discussed in chapter 8.2.4.

The restrictor furthermore forms a fixed combination with ɔ́kkwí, giving ɔ́kkwí ɬ- 'the one who' (see chapter 6.1.5).
