NOTE ON THE POSITION OF HW NORMAE

K. K. KWEE and P. N. J. WISSE

Received 12 October 1968

The position of the eclipsing variable HW Normae as given in the General Catalogue of Variable Stars (Kukarkin et al., 1958) is erroneous. This is probably due to a clerical error in the original publication by Mergenthaler (1937, star m), in which the discovery of this variable was announced. A redetermination of the position from the pair of plates originally used for the discovery resulted in:

\[
\alpha(1875) = 16^h07'm24'', \delta(1875) = -50'40''.7 \\
\alpha(1900) = 16^h09'm18'', \delta(1900) = -50'44''.3.
\]

The finding chart as well as the other data are correct.
