Author: Atesci, H.

Title: Towards an ab-axis giant proximity effect using ionic liquid gating

Issue Date: 2018-09-12

Curriculum Vitae

Hasan Ateşçi

born on August 10th 1990, in Almelo (The Netherlands)

2002-2008 Secondary Education

Pius X College, Almelo (The Netherlands)

2008-2011 BSc. Applied Physics

University of Twente, Enschede (The Netherlands)

Electronic transport properties of self-assembled monolayers of β -Cyclodextrin (β -CD) molecules

Supervision of Prof. dr. ir. Harold Zandvliet

2011-2013 MSc. Applied Physics

University of Twente, Enschede (The Netherlands)

Electronic properties of Pt and Au induced nanowires on Ge(001) surfaces

Supervision of Prof. dr. ir. Harold Zandvliet

2013-2017 PhD. Research in Physics

Leiden University, Leiden (The Netherlands)

Towards an ab-axis giant proximity effect using ionic liquid gating

Supervision of Prof. dr. Jan van Ruitenbeek and Prof. dr. ir. Hans Hilgenkamp

2018-Now Design Engineer

ASML, Veldhoven (The Netherlands)

Acknowledgements

I start with thanking the Almighty Creator, Allah, for giving me the perseverance to successfully accomplish my thesis. I would also like to thank those that helped me along the way.

Firstly, I would like to express my deepest gratitude to Jan van Ruitenbeek for this great project that he has offered me. His cordial supervision and our helpful and fruitful discussions really helped me a great deal, both personally and professionally. He always patiently listened to my stories and issues when I would walk into his office. Thanks so much! I would also like to express my thanks to Hans Hilgenkamp with whom I enjoyed many discussions. He had many great suggestions, and came up with many out of the box ideas that put new energy into the project. Thank you!

I thank Sasha Vbrica and Sumit Tewari for their stimulating company. It was a pleasure to be part of the same group. My special gratitude goes to my former student Wouter Gelling and his classmates Xavier Le Large and Bart Woltjes for the nice moments we shared together, and the occasional moments at the coffee machine. I would like to thank Jan Aarts for allowing me to use his measurement setups for some years and Amrita Singh and Stefano Voltan for their cordial advice on critical aspects of experimental issues. Furthermore, I would like to extend my thanks to my university neighbor Sander Blok, for his help with operating the cryostat, and fruitful discussions. Marcel Hesselberth for his in-depth knowledge of a lot of processing steps required for my research, and the same goes for Daan Boltje and Douwe Scholma. Federica Galli, thank you for your help and good company! Next, I thank Peter van Veldhuizen from the electronics department, and Ellie, Charlotte and Shirley for their administrative support.

To those (who used to be) at the University of Twente, I would like to thank Francesco Coneri, for his optimism and help in picking things

up very quickly in the beginning of my project. Frank Roesthuis has been a great help and partner as well. I could always come to you whenever I needed help, not only for urgent problems, but also for the more generic things. Thanks a lot! Thank you Dick Veldhuis for help with the probe station and helium, among other things. I would like to thank Sander Smink for tips and tricks regarding processing and RHEED techniques, and Pim Reith for his Nb test samples, and Jouri Bommer for his valuable help during the research project, and the same goes for James Seddon and Serge Lemay. Many thanks to Adil Acun, my long time friend, for his companionship and for inviting me to his LEEM machine and occasional tea and coffee and cordial discussions at the University of Twente.

Last but not least, I would like thank my family members, my father, my sister, brother, and my twin brother Hüseyin, with whom I have not only completed my prenatal journey, but also my preliminary school, secondary school and university education. We have even found jobs at the same place! I think that is special. This part of the thesis would be incomplete without a special sentence devoted to my mother for her continued warmth, love and support before, during and after the project.
