**Title:** Asynchronous Programming in the Abstract Behavioural Specification Language
**Issue Date:** 2019-12-11
Chapter 1  Abstract Behavioural Specification (ABS) is a language for designing executable models of parallel and distributed object-oriented systems [48], and is defined in terms of a formal operational semantics which enables a variety of static and dynamic analysis techniques for the ABS models. In this chapter, we give a brief overview of ABS with the main focus on syntax, semantics, and the model of concurrency. Finally, a simple example that represents a model of thread pool in ABS is given.
